

Annex 1 to the Regulations - Description of services and subscription plans

I. The Website Basic services

1. Back office module:

1. As part of the Back office module, the Service Provider delivers the following Website functionalities:
 - a) uploading a 3D model of the Project by the Contractor:
 - the required format of the 3D model .glb .gltf .obj .fbx .3ds .ifc;
 - the possibility to determine the types of product materials, product spare parts;
 - the possibility to assign the price to a product, materials and spare parts;
 - the Service Provider recommends using the model in the ".gltf" format.
 - b) modeling the lighting of the Project:
 - the possibility to assign specific types of lighting and place them in 3D space.
 - c) setting the colors and texture of the Project
 - the required color and texture format .jpeg, .png;
 - The Service Provider recommends uploading the highest quality colors and textures, at least 1024px×1024px, The Service Provider is not responsible for the appearance of the Project in case of uploading a Project of lower quality than recommended;
 - d) the possibility to upload optional parts of the Project;
 - e) the possibility of grouping parts of the Project into one:
 - many parts of a Project can be combined into a functional whole without being separated;
 - f) the possibility of blocking the editing function of the Project (or a given part) by the Client or allowing the Client to remove elements of the Project;
 - g) the possibility of moving the Project or its part in space;
 - h) the possibility to change the size of elements within the frame of parameters set;
 - i) the possibility to put one's own text on the Project and edit it;
 - j) the possibility of switching between Projects (from the Main Project to the detailed Projects and vice versa);
 - k) the possibility of making the finished Project available to the Client.

2. Client component

The Service Provider delivers the following methods of making the Project available to the Client:

- a) by generating an external link – after clicking the link, the Client is transferred to the Website;
- b) by generating a QR code – after scanning the QR code, the Client is transferred to the Website;
- c) through the integration module - i.e. a program that is an implementation of the client component for a given e-commerce platform.

As part of the client component, the Service Provider delivers the following functionalities of the Website:

- a) The Client receives access to the Project;
- b) The Client can view the Project;
- c) The Client may, on the basis of the parameters provided by the Contractor, configure the Project to his own requirements;
- d) The Client has an option to display the Project in augmented reality on his/her device;
- e) The Client has an option to save the finished Project and send it to the Contractor;
- f) the component collects information about the Client (from which location the Project was viewed, the length of the Project configuration, information about the device and system used to configure the Project, what kind of configuration he/she has made in the Project, which parts of the Project he/she has configured).

3. The integration module

As part of the integration module, the Service Provider delivers the following functionalities of the Website:

- a) The Contractor has the possibility of integrating the Website's functionalities to its own webpage;
- b) The Service Provider gives the Contractor an integration code to be placed on the Contractor's webpage source code,
- c) The Service Provider gives a link to the WordPress Website plugin.

4. CustomizeMe Fronted Component

As part of the CustomizeMe Fronted Component, the Service Provider makes available the following Website functionalities:

- a) the possibility to handle a certain number of products in the Contractor's online store depending on the selected Subscription Plan;
- b) the possibility to use the default User interface;
- c) the possibility of placing the Component in a certain number of Contractor's online stores depending on the selected Subscription Plan.

II. The Website Additional services

As part of the Website, the Service Provider delivers Services in the following additional modules (optional):

- a) SeeMe – a source code that can be placed on the website, which allows to download a 3D model from the Contractor's server and trigger a hardware acceleration on a mobile platform (IOS and Android);
- b) SeeMe Premium – a source code generator, placed on the website, which allows to download a 3D model from the Contractor's server and triggers a hardware

acceleration on a mobile platform (IOS and Android). While generating this code, the Contractor may specify the fields provided in the form;

- c) Sharable – a function that enables real-time configuration sharing in the "CustomizeMe Component" by multiple users. The condition for using the add-on is the use of the Service Provider's IT infrastructure;
- d) ConvertMe – an application hosted by the Service Provider that allows converting the 3D model from the ".gltf", ".glb", ".obj", ".fbx", ".stl" formats to the IOS and Android platform compatible formats. The end product of the program are two 3D models. By selecting this add-on, the Contractor agrees to the free use of the add-on operation results for research and development works of the Service Provider and agrees to the (free of charge for the Contractor) commercial use of the research and development work by the Service Provider;
- e) Native Ar Configurator – a function that allows generating 3D models, based on the configurations created in the "CustomizeMe component" that can be opened by native applications of IOS and Android mobile devices.

III. Subscription plans description
